

# Displays & More

Press Play: Interactive Device Design | April 18, 2011

# Electrolytic Capacitor Explosion

# Homework Sharing

# When are things due?

Homework - Mondays

Labs - Wednesdays

Please bring the products of Lab 2 & 3 to class next week.

# Displays

## Variations on LEDs

# Displays

## Variations on LEDs

# Displays

## Variations on LEDs

# Displays

## Character displays

- Variations:
  - dimensions
  - # columns and rows
  - Colors
  - Voltages
  - Backlight
  - HD44780 compatibility
  - Control interfaces (parallel v. serial)

# Displays

## Graphical displays

- Variations:
  - dimensions
  - pixel width & height
  - LCD v. OLED
  - Voltages
  - Backlight
  - Color
  - Control interfaces

# Voltage Regulation

Why would we want to regulate voltage?

- The 3-Axis Accelerometer sensor will operate between 2.2 and 6 volts. Because the MMA7361 chip only will deal with 3.6 volts maximum, the sensor is equipped with a low-dropout regulator so the sensor will work, out of the box, with an Arduino or other 5 volt microcontroller. At 5 volts the sensor draws around 50  $\mu$ A with the shunt off and 100  $\mu$ A with the shunt on. The current draw at 3.3 V is 150 / 200  $\mu$ A respectively.

# Voltage Regulation

How to get the voltage you want

- Check:
  - Input/Output voltages (LDO)
  - Current rating
  - Package
- Here, classic 7805 +5V linear regulator
  - The regulating device is made to act like a variable resistor, continuously adjusting a voltage divider network to maintain a constant output

# Voltage Regulation

## How to get the voltage you want

KIA7805AP/API

ELECTRICAL CHARACTERISTICS ( $V_{IN}=10V$ ,  $I_{OUT}=500mA$ ,  $0^{\circ}C \leq T_j \leq 125^{\circ}C$ )

CHARACTERISTIC	SYMBOL	TEST CIRCUIT	TEST CONDITION	MIN.	TYP.	MAX.	UNIT
Output Voltage	$V_{OUT}$	1	$T_j=25^{\circ}C$ , $I_{OUT}=100mA$	4.8	5.0	5.2	V
Input Regulation	Reg line	1	$T_j=25^{\circ}C$				mV
			$7.0V \leq V_{IN} \leq 25V$	-	3	100	
Load Regulation	Reg load	1	$T_j=25^{\circ}C$				mV
			$5mA \leq I_{OUT} \leq 1.4A$	-	15	100	
			$T_j=25^{\circ}C$				mV
			$250mA \leq I_{OUT} \leq 750mA$	-	5	50	
Output Voltage	$V_{OUT}$	1	$7.0V \leq V_{IN} \leq 20V$ $5.0mA \leq I_{OUT} \leq 1.0A$ , $P_o \leq 15W$	4.75	-	5.25	V
Quiescent Current	$I_B$	1	$T_j=25^{\circ}C$ , $I_{OUT}=5mA$	-	4.2	8.0	mA
Quiescent Current Change	$\Delta I_B$	1	$7.0V \leq V_{IN} \leq 25V$	-	-	1.3	mA
Output Noise Voltage	$V_{NO}$	1	$T_a=25^{\circ}C$ , $10Hz \leq f \leq 100kHz$ $I_{OUT}=50mA$	-	50	-	$\mu V_{rms}$

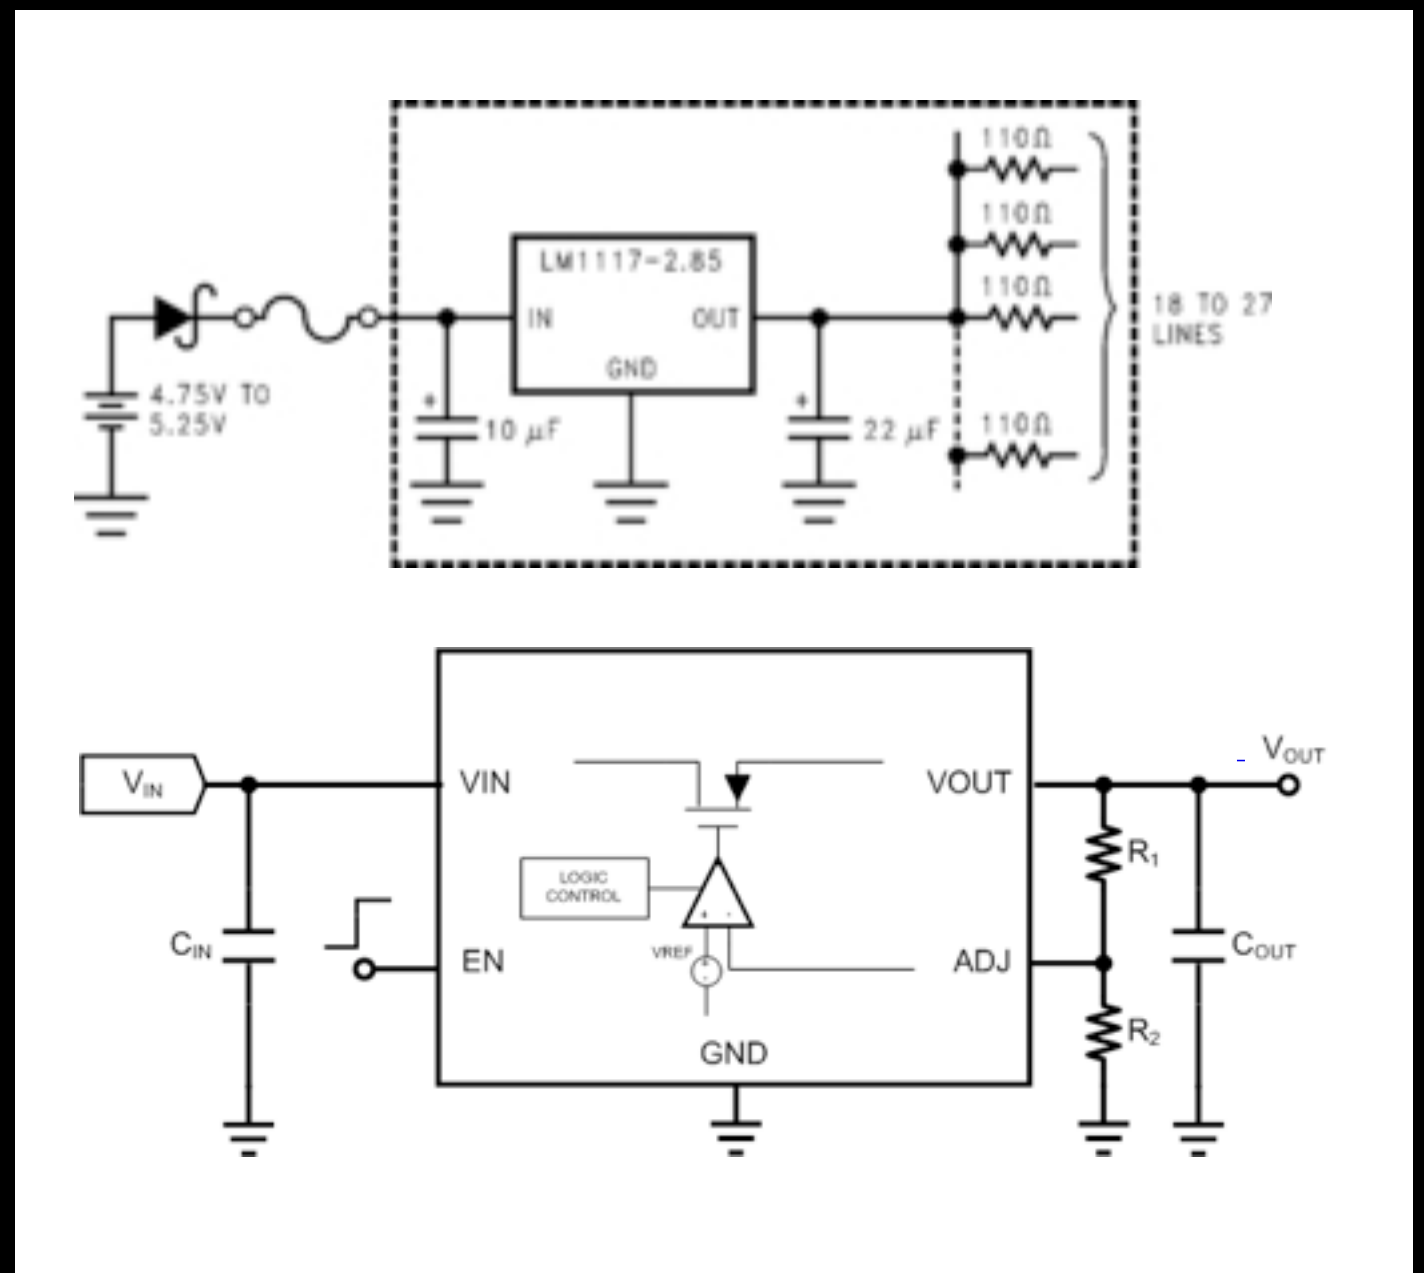

# Voltage Regulation

## How to get the voltage you want

LM1117-3.3V 800mA  
Low-Drop Out (LDO)  
Linear Regulator

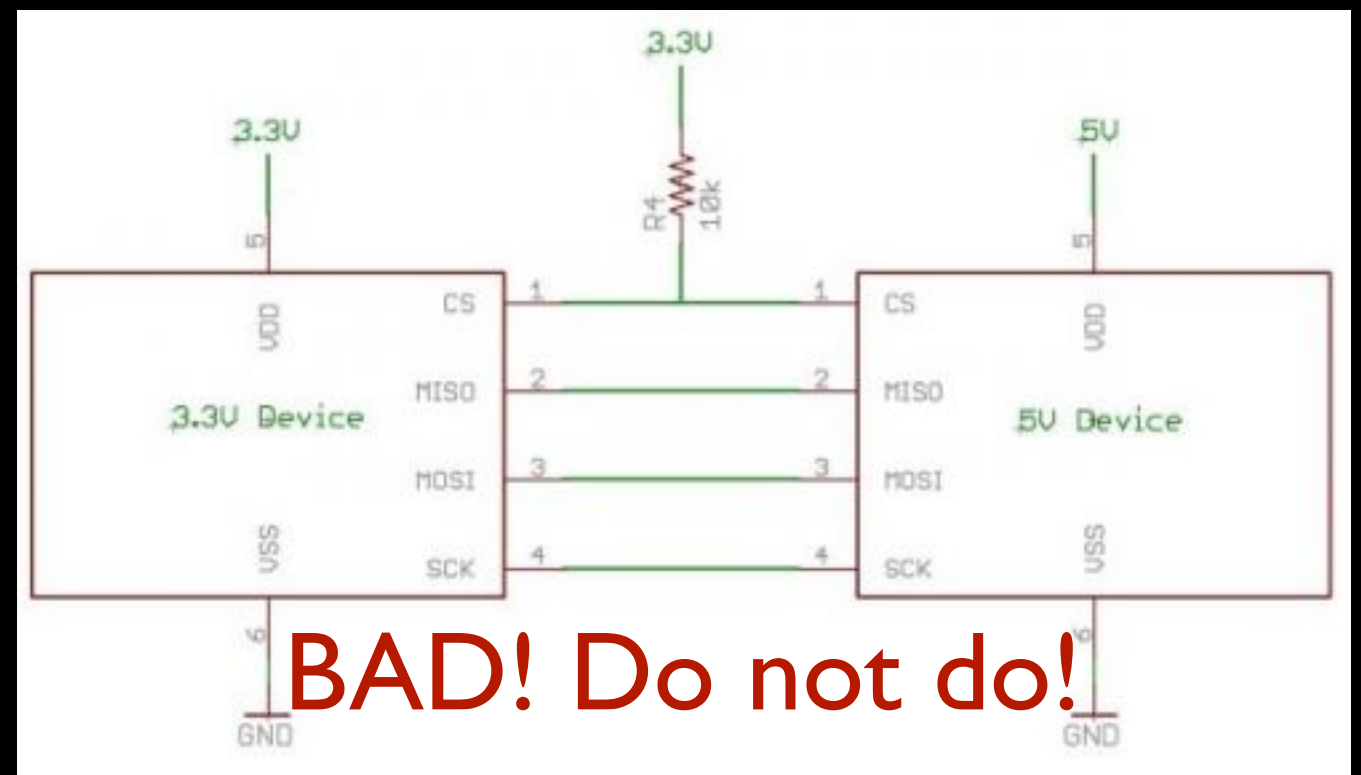

Also available in 1.8V,  
2.5V, 2.85V, 3.3V, 5V  
and Adjustable  
versions

# Voltage Level Shifting

Why would you want to shift the voltage?

- Why are there different voltages anyway?
- What can go wrong when connecting 3.3 V and 5V devices?

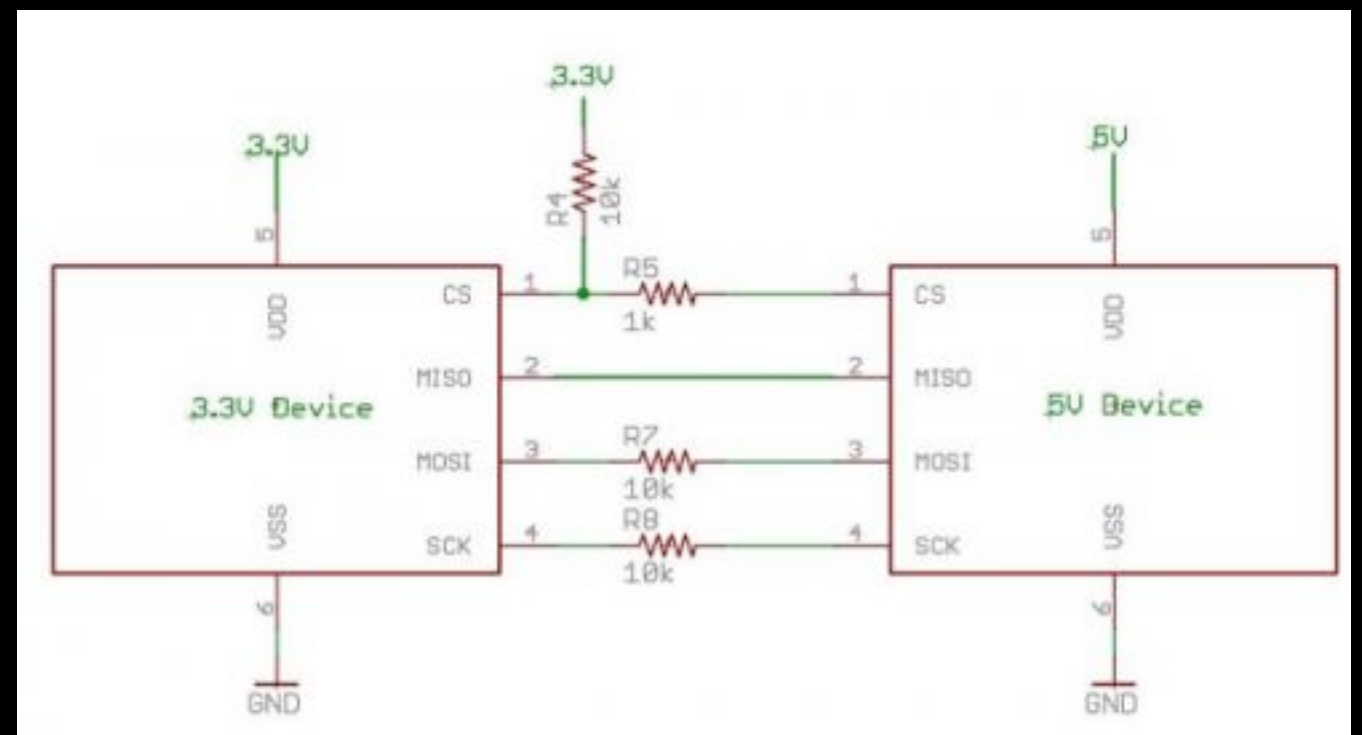

[http://www.sparkfun.com/commerce/tutorial\\_info.php?tutorials\\_id=65](http://www.sparkfun.com/commerce/tutorial_info.php?tutorials_id=65)

# Voltage Level Shifting

Why would you want to shift the voltage?

# Why would you want to shift the voltage?

- 
- Diagram illustrating the connection of the MIC 29150 3.3V voltage detector to a microcontroller and a 5-15V DC supply.
- The MIC 29150 3.3V detector is connected to the 5-15V DC supply. Its Vcc pin is connected to the supply, and its GND pin is connected to ground.
- The detector's X, Y, Z, GS1, GS2, and SLP pins are connected to a common node. This node is also connected to a 10KΩ resistor and a 3.3V Zener diode. The Zener diode is connected to ground.
- The GS1 and GS2 pins are connected to +5V or GND as appropriate (see notes).
- The SLP pin is connected to the microcontroller digital out.
- The X, Y, Z, GS1, and GS2 pins are connected to the microcontroller analog in.

# Where do we get cool sensors, displays and actuators?

Fry's (Palo Alto)

Radio Shack (everywhere)

HSC / Halted (electronic surplus)

Jameco Electronics (San Carlos)

?Arrow Electronics (Santa Clara)

Digikey (online)

McMaster Carr (online, for mechanical)

Sparkfun (online, hobbyist)

Acroname (online, robotics)

# Lab 4 Preview: Data Logger

Sound! Lights! Acceleration! Gesture!

Using the serial monitor

Writing to the EEPROM
